

HOW OTT SOLUTIONS BOOSTED **SPEED** AND **AVAILABILITY**

Case Study with

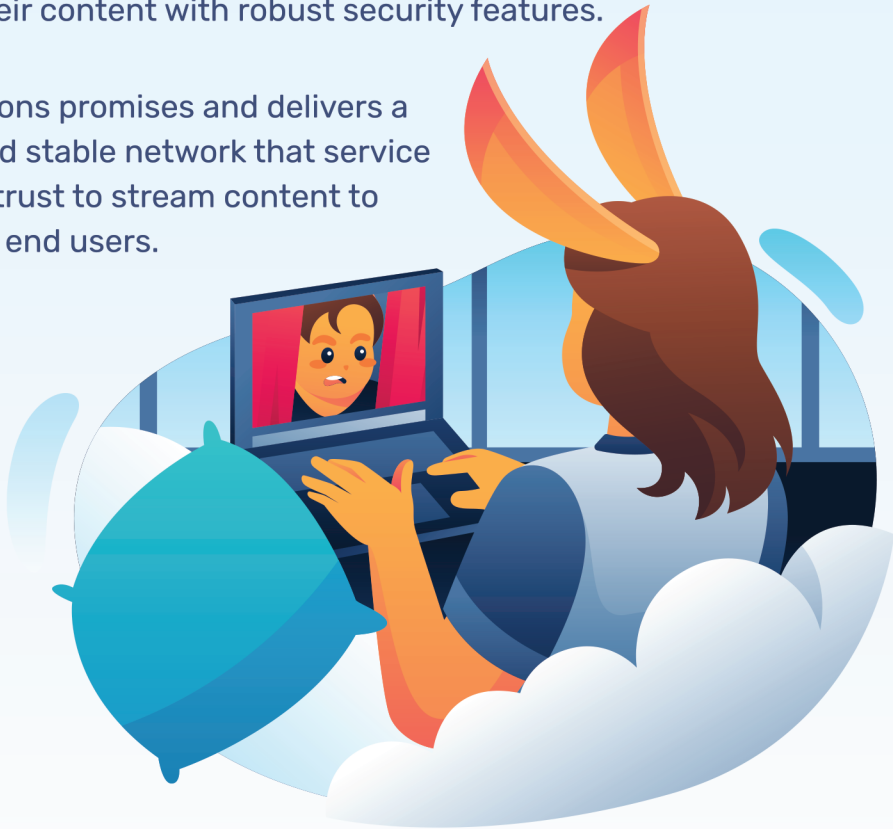

About OTT SOLUTIONS

OTT Solutions builds turnkey Live TV and VOD streaming solutions for telecommunication and broadcasting service providers worldwide. They make streaming services possible for Vodafone, Telefonica, Telekom Srbija, Eurosport, beIN SPORTS, euronews, and Bloomberg, to name a few.

In addition to providing an easy-to-use streaming platform with a clean user interface, they help service providers protect their content with robust security features.

OTT Solutions promises and delivers a reliable and stable network that service providers trust to stream content to millions of end users.

The Challenges

Although OTT Solutions had a trustworthy, reliable network, they needed a strong architecture to keep it that way. They needed a CDN to boost network reliability and bolster their network backbone.

OTT Solutions used other CDNs, but these other networks lagged behind their standards. Thousands of customers in the Balkans couldn't even watch sports during peak hours without buffering caused by network bottlenecks.

Even a few minutes of downtime rippled to customers' customers, so OTT Solutions needed a stable network that wouldn't go down - not for even a minute.

Their other CDN providers weren't supplying enough stability. OTT Solutions needed someone to lighten the load - so they came to bunny.net.

The Solution

The bunny.net team didn't disappoint. We set up a network that provided a fast, reliable connection with a peer-to-peer backup network that eliminated buffering during peak hours. OTT Solutions also noticed that bunny.net was **faster than their other CDNs** in some regions. Implementing BunnyCDN was as quick as a bunny hop, thanks to our support library.

We gave OTT Solutions **24/7 access** to our Super Bunny support team, but they were pleased to say they **barely needed them**.

They felt empowered to resolve most issues themselves, with the Super Bunnies on standby for backup.

Happy Customers

Reliability and speeds increased across their networks, and we eliminated buffering in some high-traffic regions.

High Speed

Improving the storage and fetching of assets from the origin accelerated download speeds and stability.

Easy Setup

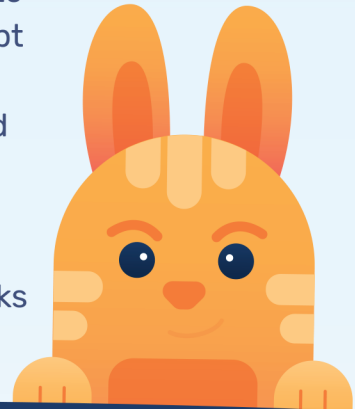

Implementing bunny.net was a breeze with our intuitive dashboard and straightforward documentation.

The Conclusion

OTT Solution needed a little extra help to stabilize their networks and free up network traffic. Once OTT Solutions started working with bunny.net, we gave them the stability that they needed.

We improved availability by providing additional points of presence, with peer-to-peer backup to prevent outages. Our supercharged speeds kept customers right in the action. Plus, we impressed them with our fantastic support and customer service.

With fewer network bottlenecks and improved reliability, OTT Solutions can keep their networks hopping.
